

# Marine Science 2019 v1.1

## IA1 sample assessment instrument

April 2018

### Data test (10%)

This sample has been compiled by the QCAA to assist and support teachers in planning and developing assessment instruments for individual school settings.

### Assessment objectives

This assessment instrument is used to determine student achievement in the following objectives:

2. apply understanding of the reef and beyond or changes on the reef to given algebraic, visual or graphical representations of scientific relationships and data to determine unknown scientific quantities
3. analyse evidence about the reef and beyond or changes on the reef to identify trends, patterns, relationships, limitations or uncertainty in datasets
4. interpret evidence about the reef and beyond or changes on the reef to draw conclusions based on analysis of datasets.

**Note:** Objectives 1, 5, 6 and 7 are not assessed in this instrument.

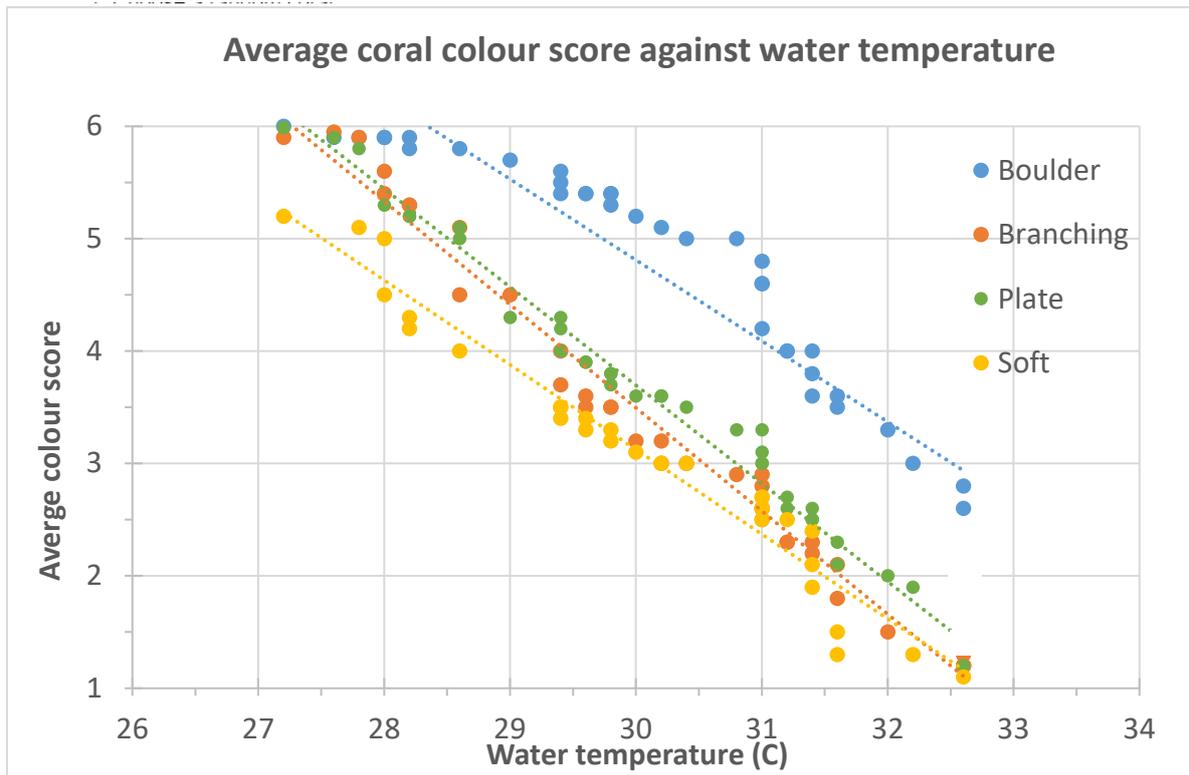

Figure 1

### Coral Health Chart

Students used the colour chart in Figure 1 to record the health of different types of corals. On a scale of 1 (bleached) to 6 (healthy) the average coral colour score is plotted against temperature in Graph 1.

Graph 1

Source: <https://www.coralwatch.org/web/guest;jsessionid=BE64714E7EAA93A2FA3ECB9845DAE5BD>

**Item 1 (apply understanding)**

**2 marks**

**Determine** the:

- a. average colour score of a plate coral at 28.5 degrees Celsius (to 1 decimal place).

Answer:  
(1 decimal place)

- b. temperature at which soft coral has an average colour score of 2 (to 1 decimal place).

Answer: \_\_\_\_\_ °C  
(1 decimal place)

**Item 2 (analyse evidence)**

**2 marks**

**Identify** the relationship between coral colour score and temperature:

---

---

**Item 3 (interpret evidence)**

**2 marks**

**Predict** the relative bleaching of plate coral and boulder coral at 33.5 degrees Celsius. Give reasons for your prediction.

---

---

---

---

---

Acropora Sp.

The growth rate of 3 different species of *Acropora* coral was measured in centimetres per year at two reef locations. Reef A was 50 metres from a dredged channel, reef B was 5 km from a dredged channel.

The growth rates measured are presented in the table below along with the calculated P – Values for the data sets for each coral species.

<i>Acropora Sp.</i>	Reef A Growth (cm per year)	Reef B Growth (cm per year)	P- Value
1	10	15	0.1
2	12	16	0.01
3	8	10	0.001

**Source:** University of Queensland

**Item 4 (apply understanding)****2 marks**

**Determine** which *Acropora Sp.* shows the least difference in growth rate between reef A and reef B.  
Give reasons for your answer

Species Number \_\_\_\_\_

**Calculate** the difference in the average annual growth rate for all corals on Reef A and Reef B.  
Show your working.

Answer:  
cm/year

**Item 5 (analyse evidence)**

**2 marks**

**Contrast** the growth rate of the three *Acropora* species at Reef A and Reef B.

**Item 6 (interpret evidence)**

**2 marks**

**Infer** from the table above what affect dredging has on species 1 and species 3. Give reasons for your answer.

Species 1.

---

---

Species 3.

---

---

**Item 7 (interpret evidence)**

**2 marks**

**Draw a conclusion** about what the different p-values show with regard to the effects of dredging on Species 2 and Species 3. Give reasons for your conclusion.

---

---

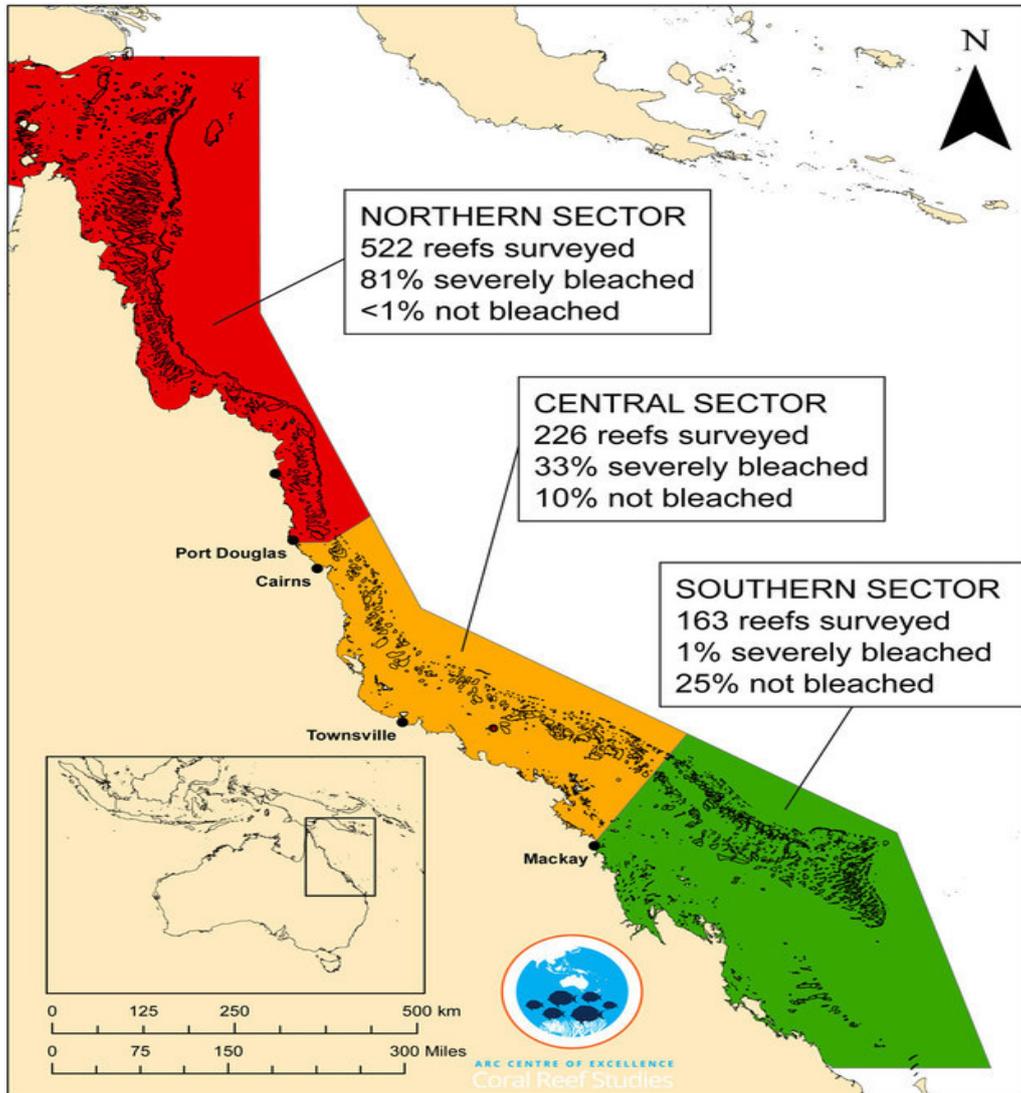

---

---

---

Figure 2.

Map of the Great Barrier Reef showing results of aerial surveys on reefs affected by the 2016 coral bleaching event- JCU

Item 8 (apply understanding)

2 marks

Calculate the following:

- a. The % of all surveyed reefs that were severely bleached. Show your working.

Answer: \_\_\_\_\_ %

b. The number of reefs not bleached in the Southern and Central Sectors.

Answer:

**Item 9 (analyse evidence)**

**2 marks**

**Contrast** the % of reefs severely bleached and not bleached across the 3 sectors.

Answer:

% \_\_\_\_\_

**ITEM 10 (interpret evidence)**

**2 marks**

**Draw a conclusion** about why the levels of severely bleached corals differ across the three survey regions. Give reasons for your conclusion.

## Criterion: Data test

### Assessment objectives

2. apply understanding of the reef and beyond or changes on the reef to given algebraic, visual or graphical representations of scientific relationships and data to determine unknown scientific quantities
3. analyse evidence about the reef and beyond or changes on the reef to identify trends, patterns, relationships, limitations or uncertainty in datasets
4. interpret evidence about the reef and beyond or changes on the reef to draw conclusions based on analysis of datasets

The student work has the following characteristics:	Cut-off	Marks
<ul style="list-style-type: none"> <li>• consistent demonstration, across a range of scenarios about the reef and beyond or changes on the reef, of               <ul style="list-style-type: none"> <li>– selection and correct application of scientific concepts, theories, models and systems to predict outcomes, behaviours and implications</li> <li>– correct calculation of quantities through the use of algebraic, visual and graphical representations of scientific relationships and data</li> <li>– correct and appropriate use of analytical techniques to correctly identify trends, patterns, relationships, limitations and uncertainty</li> <li>– correct interpretation of evidence to draw valid conclusions.</li> </ul> </li> </ul>	> 90%	10
	> 80%	9
<ul style="list-style-type: none"> <li>• consistent demonstration, in scenarios about the reef and beyond or changes on the reef, of               <ul style="list-style-type: none"> <li>– selection and correct application of scientific concepts, theories, models and systems to predict outcomes, behaviours and implications</li> <li>– correct calculation of quantities through the use of algebraic, visual and graphical representations of scientific relationships and data</li> <li>– correct use of analytical techniques to correctly identify trends, patterns, relationships, limitations and uncertainty</li> <li>– correct interpretation of evidence to draw valid conclusions.</li> </ul> </li> </ul>	> 70%	8
	> 60%	7
<ul style="list-style-type: none"> <li>• adequate demonstration, in the reef and beyond or changes on the reef, of               <ul style="list-style-type: none"> <li>– selection and correct application of scientific concepts, theories, models and systems to predict outcomes, behaviours and implications</li> <li>– correct calculation of quantities through the use of algebraic, visual and graphical representations of scientific relationships and data</li> <li>– correct use of analytical techniques to correctly identify trends, patterns, relationships, limitations and uncertainty</li> <li>– correct interpretation of evidence to draw valid conclusions.</li> </ul> </li> </ul>	> 50%	6
	> 40%	5
<ul style="list-style-type: none"> <li>• demonstration, in scenarios about the reef and beyond or changes on the reef, of elements of               <ul style="list-style-type: none"> <li>– selection and correct application of scientific concepts, theories, models and systems to predict outcomes, behaviours and implications</li> </ul> </li> </ul>	> 30%	4
